

JTAGjet-C166-USB

- 1 **Please register at** www.signum.com/register.htm to qualify for technical support, software updates, the manufacturer warranty and special offers.
- 2 **Insert CD** Insert the Signum *Development Tools for Microsoft Windows* CD-ROM into the drive.
- 3 **Install USB driver** Plug the JTAGjet emulator into the USB port. When prompted for the JTAGjet USB driver, point to the SigUSB.inf file in the root of the CD-ROM. See *USB 2.0 Driver for JTAGjet and ADM51: Installation Instructions* for details.
- 4 **Install software** From the CD-ROM, install Chameleon Debugger the Infineon C166. For details, please refer to *Chameleon/JTAGjet for the C166 Processor: Installation Instructions*.
- 5 **Configure target** Connect the JTAGjet to the target board, power the board, start Chameleon, and configure the target. For more information, see the *Installation Instructions* for the debugger.
